

Robustel Use Cases

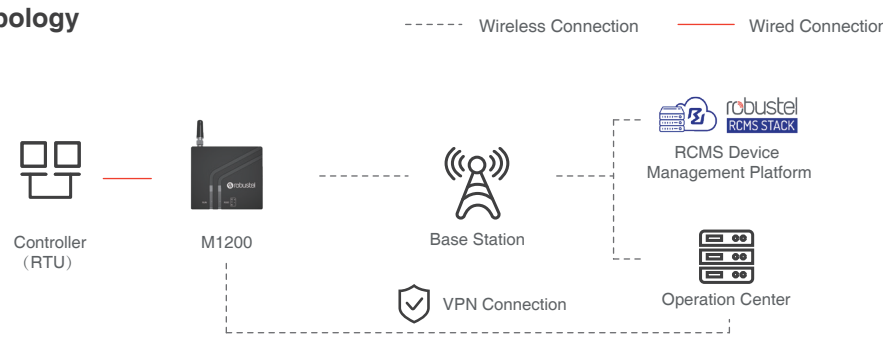

Energy & Utilities

Urban Water Supply Pipeline Monitoring Solution

Monitor urban water supply pipelines in real-time using a controller (RTU) connected to sensors and solenoid valves. The RTU is linked to the Robustel industrial IoT gateway, which collects and transmits data (pressure, flow, valve status) to a monitoring center via 4G LTE network. This ensures effective management and maintenance of the water supply system, reducing downtime and improving efficiency.

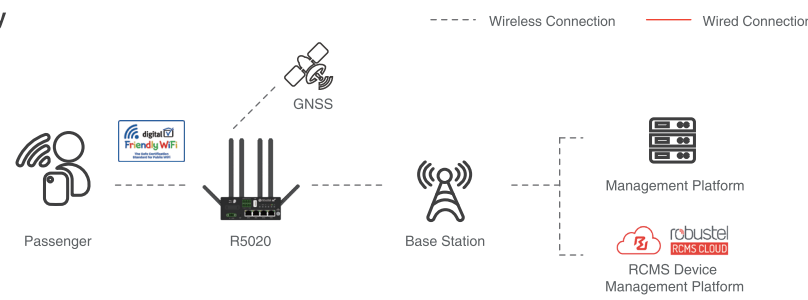

Topology

Bus Passenger Wi-Fi Solution

Robustel Passenger Wi-Fi system offers seamless connectivity and improved passenger experience for travelers. The Robustel IIoT Gateway is connected to the Internet through a cellular network, providing high-speed Wi-Fi access services for bus passengers through 2.4 GHz or 5 GHz Wi-Fi, with a powerful, flexible and very cost-effective content filtering service, awarded the "Friendly Wi-Fi" seal of approval.

Transportation & Logistics

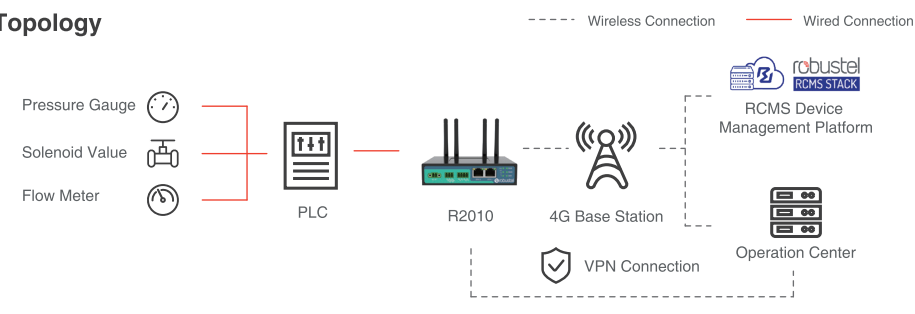

Oil, Gas & Mining

Urban Natural Gas Pipeline Remote Monitoring Solution

Robustel IIoT Gateway provides a wireless cellular communication solution for monitoring gas pipelines. By collecting data from pressure sensors, flow sensors, and PLCs via serial ports, it reports real-time status data and alarm information to the gas supply company's operation center through a 4G LTE network. This enables intelligent decision-making for natural gas resource scheduling and pipeline maintenance, ensuring a stable and reliable gas supply.

Topology

Robustel Use Cases

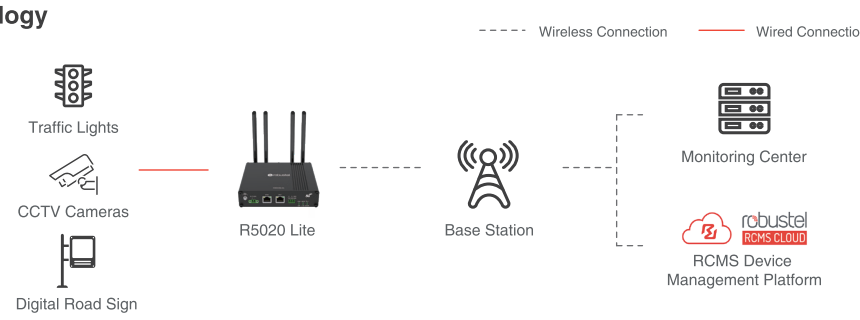

Smart Cities

Urban Road Traffic Monitoring Solution

Real-time traffic monitoring is crucial for urban traffic management departments. An efficient solution involves using intelligent traffic lights and digital traffic guidance signs to optimize flow and provide real-time information to drivers. The Robustel IIoT Gateway connects and transmits data through a high-speed 5G network, ensuring smooth traffic flow.

Topology

Industrial Robot Networking Solution

Industrial robotic arms can now benefit from wireless networks, saving costs and ensuring safety. With Robustel IIoT Gateway, data transmission is stable and low-latency, providing the necessary support for large amounts of data. By connecting to the operation platform and our RCMS device management platform through a private 5G network, real-time operational data can be collected and reported, improving maintenance service capabilities.

Topology

Industrial IoT

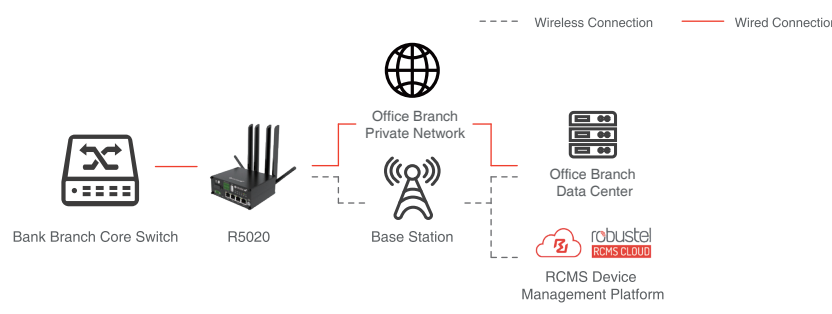

Enterprise IT

Enterprise Branch Disaster Recovery 5G Networking Solution

Enterprise Branch Disaster Recovery 5G Networking Solution provides businesses with a reliable backup network connection to ensure operational continuity in the event of a main network failure. By connecting enterprise office devices to the core switch via Ethernet/Wi-Fi, and using cellular networks as a backup, our solution offers a secure and stable backup network connection. With VPN tunnels creating a secure virtual LAN between branch offices, quick network restoration and minimal disruptions are guaranteed.

Robustel Cloud Manager Service

robustel
CLOUD MANAGER SERVICE
DEPLOY | MANAGE | CONTROL

Robustel Cloud Manager Service (RCMS) is a modular IoT cloud software platform compatible with all Robustel products. RCMS is designed from the ground-up to empower Robustel customers to build their IoT Solution (s) in a manner that is scalable, cost effective and can evolve quickly with the market. Designed to work hand-in-hand with RobustOS, RCMS unlocks the true potential of Robustel products giving customers the ultimate range of monitoring, management and control functions.

Monitor

The RobustLink APP inside RCMS gives you visibility of your entire Robustel device fleet in a single location from anywhere in the world. View device status, signal strength, data usage and WAN details for any device connected to the touch of a button.

Robustel has the final right to interpret the content.

Manage

Use the RobustLink APP inside RCMS to access your devices remotely to change configuration parameters or send device commands through remote Command Line Interface (CLI) access. Maintain your fleet through Over-the-Air (OTA) updates for Firmware, APPS and Configuration files in bulk or for a single device.

Control

Use the RobustVPN App inside RCMS to create a virtual LAN for your devices that can be accessed securely from anywhere in the world using the preconfigured desktop VPN client.
